PROFESSIONAL SUMMARY

Full Stack Developer with 6 years of experience designing and delivering high-performance, secure, and scalable web applications. Backend expert (PHP, Symfony, Python / Django, FastAPI) with strong frontend skills (Vue.js, React, Next.js), I drive development projects from inception to production while maintaining a sharp focus on business needs. My goal: turn complex challenges into concrete solutions that save time, cut costs, and generate measurable value.

WORK EXPERIENCE

Full Stack Developer & Tech Lead | Universal Medica Group | 2023 – Present

- Led the migration of a SaaS LMS from v3 to v4 over 18 months: full architecture overhaul and development of a robust API — +25% performance improvement, delivering a faster, more secure, and more maintainable application.
- Consolidated infrastructure from 10 independent servers (one per client lab) to a shared OVH cloud architecture with S3 storage — estimated cost reduction of 5–15%, significantly simplified maintenance.
- Built an internal document monitoring automation tool for a 5-person team: automatic metadata extraction, integrated validation workflow — 20% time savings on the analysis process.
- Proactively identified and patched a SQL injection (SQLi) vulnerability before any exploitation — protected data of thousands of users, critical incident prevented.
- Mentored a junior developer (work-study) for 2 years on frontend development — accelerated delivery cycles and strengthened team capabilities.
- Acting technical reference: business requirements scoping, technical specifications, and documentation to ensure product continuity and scalability.

Full Stack Developer | Freelance | 2020 – 2023

- Delivered 10+ web projects (showcase websites, e-commerce) — clients gained measurable improvements in online visibility, credibility, and digital performance.
- Optimised performance and SQL queries across multiple projects: significant reduction in load times — faster, better-ranked, and more user-friendly websites.
- End-to-end ownership: requirements analysis, custom development (backend & frontend), QA, and client training — operational deliverables with quick and autonomous onboarding.

TECHNICAL SKILLS

Languages: PHP, JavaScript, HTML, CSS, Python, SQL

Frameworks & Libraries: Symfony, Laravel, Django, FastAPI, Vue.js, React, Next.js, Bootstrap, Tailwind CSS

Databases: MySQL, MariaDB, PostgreSQL

Tools & Environment: Git, Docker, VirtualBox, Apache, AWS S3

Methodologies: Agile / Scrum, CI/CD, Unit Testing, Application Maintenance

EDUCATION

Professional Certification – Application Developer – 2020 – 2021

Professional Certification – Web & Mobile Web Developer – 2019 – 2020

Technological Baccalaureate – Accounting & Finance – 2011
